файл шаблона mediamanager.php

The media manager's functionality has changed drastically since the last major release of DokuWiki; however, the code in the background is only slightly different, and requires that you use CSS or table based layout.

Minimum Requirements

Functionality

For minimum functionality, you'll need to use a tag with an id of **`media__manager`** encapsulating an empty

tag pair with an id of **`media__opts`**.

Finally, you'll need to call `tpl_mediaTree()` in order to display the tree, and `tpl_mediaContent()` to display the files to select from.

A simple example:

```
<div id="media__manager" class="dokuwiki">
    <?php html_msgarea() ?>
    <h1><?php echo hsc($lang['mediaselect'])?></h1>

    <?php /* keep the id! additional elements are inserted via JS here */?>
    <div id="media__opts"></div>

    <?php tpl_mediaTree() ?>

    <?php tpl_mediaContent() ?>
</div>
```

Look and Feel

All style information for media manager is in the standard location for stylesheets, with the prefix of `media__`; copy those into your own stylesheets and you should be fine.

Of course for customization purposes you may wish to modify the default styles.

Sample Code

See for the current default implementation in the 'dokuwiki' template at lib/tpl/dokuwiki/mediamanager.php.
