Этот плагин позволяет добавлять информацию и обложки с сайта Amazon на вики-страницу. Он чем-то похож на плагин для ISBN , но использует API веб-сервисов Amazon для получения данных. Вы можете настроить вывод плагина, изменив функцию форматирования.

Download and Installation

Search and install the plugin using the [Extension Manager](#). Refer to [Plugins](#) on how to install plugins manually.

Changes

- [Merge pull request #18 from dokuwiki-translate/lang_update_1445_17806...](#) (2026/06/04 22:57)
- [Translation update \(sk\)](#) (2026/06/04 22:41)
- [Merge pull request #17 from dokuwiki-translate/lang_update_270_161478...](#) (2021/03/04 11:12)
- [translation update](#) (2021/03/03 19:05)
- [Version upped](#) (2020/06/11 00:50)
- [Merge pull request #16 from annda/hogfather](#) (2020/06/10 11:37)
- [Remove superfluous constant definitions](#) (2020/06/09 17:22)
- [Restore loading of XMLParser](#) (2020/06/09 17:22)

Usage

Usage is simple – just use the amazon tag providing an  [ASIN](#) as shown below:

```
{{amazon>0142000280}}
```

If you want to link to a national Amazon, use the following syntax to access the German, UK, Japanese, French or Canadian Amazon site.

```
{{amazon>de:0142000280}}
{{amazon>uk:0142000280}}
{{amazon>jp:0142000280}}
{{amazon>fr:2749102448}}
{{amazon>ca:0142000280}}
{{amazon>de:382732730X}}
```

Wishlists or «ListMania» lists can be displayed using the `wishlist` or `amazonlist` keywords followed by the list id. Country support works the same as with single products above. Examples:

```
{{wishlist>de:11ACQWWKWOM3G}}
{{amazonlist>R2AD3IPI9YY0T0}}
```

Amazon dropped the support for lists in their API, there's nothing I can do about it right now. Sorry. Lists are no longer supported by this plugin.

The default configuration options set in the config manager can be overridden by giving additional space separated keywords:

```
{{wishlist>de:11ACQWWKWOM3G price =0 90x90}}
{{amazon>en:0142000280 noprice =40 50x70}}
```

(Note that it is necessary to include the country code (en:, de:, etc...) in the link or the options will not take effect (and in fact you will get an error))

The following keywords can be used:

<i>widthxheight</i>	the size of the shown image(s)
<i>=number</i>	limit outputs to this number of characters, set to 0 for no limit
<i>noprice</i>	don't show product prices
<i>price</i>	show product prices
<i>nopurchased</i>	exclude already purchased items
<i>purchased</i>	include already purchased items
<i>sortprice</i>	sort items ordered by price, cheapest on top
<i>sortpopularity</i>	sort items by personal popularity as provided by list owner
<i>sortadded</i>	sort items by the date they were added, newest on top

Configuration

Everything is configurable through the config manager.

You need to sign up for a free [Amazon AWS Developer account](#) to obtain the needed Access Keys. After got the Access Key ID and Secret Access Key, you may need to register Product Advertising API [at here](#).

You can specify the width and height of images and if you want to display prices here. You can set up Amazon Partner IDs for all supported shops. If you feel generous, leave in the IDs of the plugin author.

Note: It is recommended to enable the [fetchsize](#) option to get correct rescaling for the external images.

Some more info

[Ben Pollinger](#) created a button that could be used with this plugin in the [toolbar](#)
